RESEARCH INTEREST

My research interest is about structured data or high-order features in Computer Vision. Since it's quite mature for Euclidean space deep learning, I would like to explore some different structured data or constrained data. The covariance matrices of the feature vectors can be viewed as the second-order features. Those high-order features are constrained by their own structure, i.e., Symmetric Positive Definite. Thus this will break the basic rules in Euclidean space. But those matrices are more robust to noise and contain more high-level information. I want to try some neural networks in Euclidean space, and extend them to those structured data.

EDUCATION

<i>Ph.D. Student</i> , Department of Computer Science	2017 - 2022(Expected)
Supervisor: Vikas Singh	
University of Wisconsin-Madison , WI, U.S.	GPA 3.83/ 4.0
<i>B.E.</i> , Department of Electronic Engineering	2013 - 2017
Tsinghua University , Beijing, P.R. China.	GPA 90.9/100

PUBLICATIONS

INTERN EXPERIENCE

DAMO Academy , Alibaba	05/2019-09/2019
Mentor: Ying Chi	
Title: Research Intern	
<ul style="list-style-type: none">- Developed automated anatomical labeling of coronary arteries via CPR-GCN- Used 3D CNN with BiLSTM to extract the features from the CT images along branches- Combined both image domain and position information with the partial-residual connection to achieve 95.8% mean recall

RESEARCH EXPERIENCES	Certified Robustness Training via Gaussian Distribution	01/2020-current
	<ul style="list-style-type: none"> - Applied the certifiable randomized smoothing robustness without sampling on ResNet - Proposed a tight estimation of the channel wise Gaussian distribution - Achieved high certified accuracy as well as a larger certified radius on Cifar-10 and SVHN 	
	Flow-based Generative Model for Non-Euclidean Data	03/2019-12/2019
	<ul style="list-style-type: none"> - Introduced three invertible layers whose determinant of Jacobian is simple - Built the two-stream version of GLOW that can transfer information from one manifold to another - Transferred DTI to corresponding ODF, and vice versa, with a small reconstruction error as well as maintaining verifiable group differences - Generated/ Mixed texture images based on the local covariance matrices 	
	Point Cloud Completion	09/2019-11/2019
	<ul style="list-style-type: none"> - Used the encoder-decoder based network to roughly complete the point cloud - Utilized the nearest neighbor in the training dataset to extract local information 	
	Dilated CNN in Group Analysis of Alzheimer's Disease	08/2018-03/2019
	<ul style="list-style-type: none"> - Pre-processed the dMRI to extract the centerline/ average values along fiber bundles - Applied SPD/ S^n manifold into the Dilated CNN model to extract information from DTI/ ODF - Sped up the training and testing phases with a competitive number of parameters with the state of the art model - Got statistically significant differences on several fiber bundles, with PiB and APOE biomarkers 	
	Statistical Recurrent Model on the Manifold	01/2018-05/2018
	<ul style="list-style-type: none"> - Defined the “+ / ×” operators in the manifold space - Modified the statistical recurrent model on the SPD manifold - Reduced the number of parameters of the video classification model significantly - Achieved the state of the art of accuracy in UCF11 dataset 	
	Correlations for Image-Text Pair in Latent Space	09/2017-01/2018
	<ul style="list-style-type: none"> - Applied the pre-trained CNN as the feature extractor from the image side - Applied the word2vec method on the text as the representative of sentences - Used t-SNE to minimize the KL divergence between latent space and the Image-Text pair - Got meaningful result on the local dataset gathered from Reddit 	
	Form Line Detection in the Picture	12/2016-06/2017
	<ul style="list-style-type: none"> - Developed a system that detects and recognizes the form lines in pictures - Used the bidirectional RNN method to achieve the state of the art, with MXNet as the core of the deep-learning system - Tested in multiple dataset such as the NIST Special Database 2 and got a high accuracy rate 	
COMPUTER SKILLS	Deep learning framework: PyTorch, TensorFlow, MXNet Languages: Python, C++, Matlab, \LaTeX Softwares: Visual Studio, Matlab	
REVIEWER SERVICES	MICCAI 2020, NeurIPS 2020
